/Patrick N. Edouard/ Supervisory Patent Examiner, Art Unit 2626			

Continuation of 11. does NOT place the application in condition for allowance because: With respect to Claim 33, the applicant argues that Brandt et al (US 6,278,975) fails to teach a display means at an interface of a medical system because Brandt displays voice commands at a separate computer that is not part of a microsurgical system (Amendment, pages 10-11). In response, the examiner notes that the computer display taught by Brandt is part of a medical system interface. More specifically, Brandt illustrates that the display is part of a medical system, provides a visual interface to the medical system, and offers feedback to a user regarding system and voice command response/status (Figs. 7-8). In other words, the computer display in Brandt acts as a means for a user to control and interact with the medical system, and thus, is a medical system interface. With respect to the remainder of the independent claims, the applicant argues that the system taught by Greenberg (US 6,514,201) cannot be characterized as a PACS or medical dictation system (Amendment, Pages 11-12). In response, the examiner notes that the applicant has provided no specific arguments as to why Greenberg fails to teach a PACS system. As was detailed in the previous Office Action, however, Greenberg's system allows medical images to be stored for access over a network and subsequent retrieval, and thus is a PACS system (Prior OA, Page 4). The applicant further argues that although Greenberg may insert text into a medical image through speech recognition, this process is not the claimed annotating of a radiological image (Amendment, Page 12). In response, it is pointed out that text is a form of annotation and ultrasounds are a type of radiological image (see also Prior OA, Page 4), thus these arguments are not convincing.

Continuation of 13. Other: In response to the amended specification,, the previous objection directed to new matter is withdrawn.
